

Assignment 2:

Using EBS with EC2 Linux Server Instances.

Synopsis:

Demonstrate the creation, attaching, accessing and updating of an additional Elastic Block Store (EBS) across EC2 Linux Servers in the same Subnet as well as in the subnets (of a user created Virtual Private Network (VPC)) created in different Availability Zones (AZs) of the region.

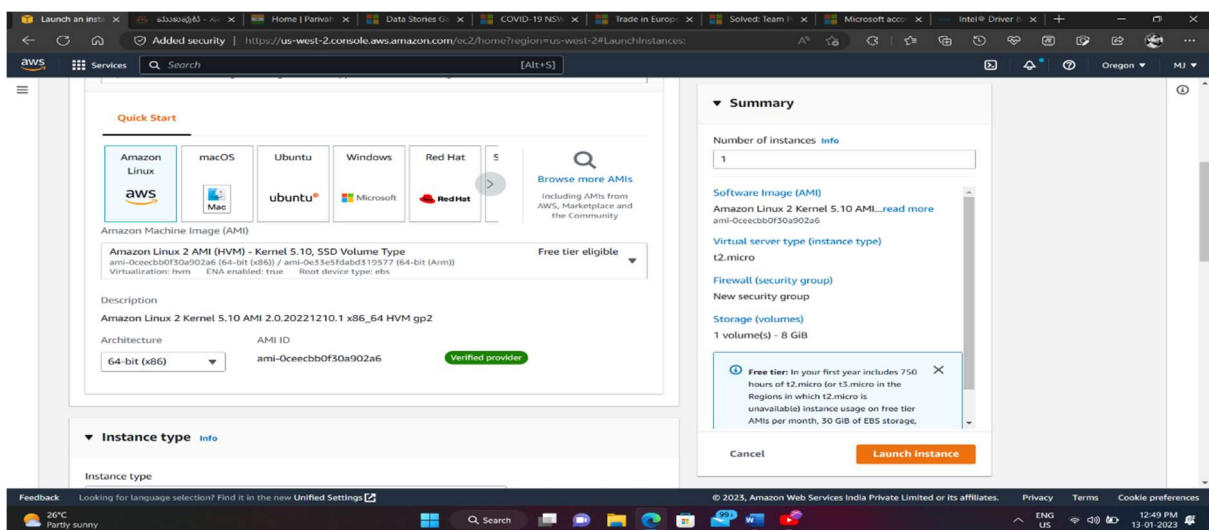

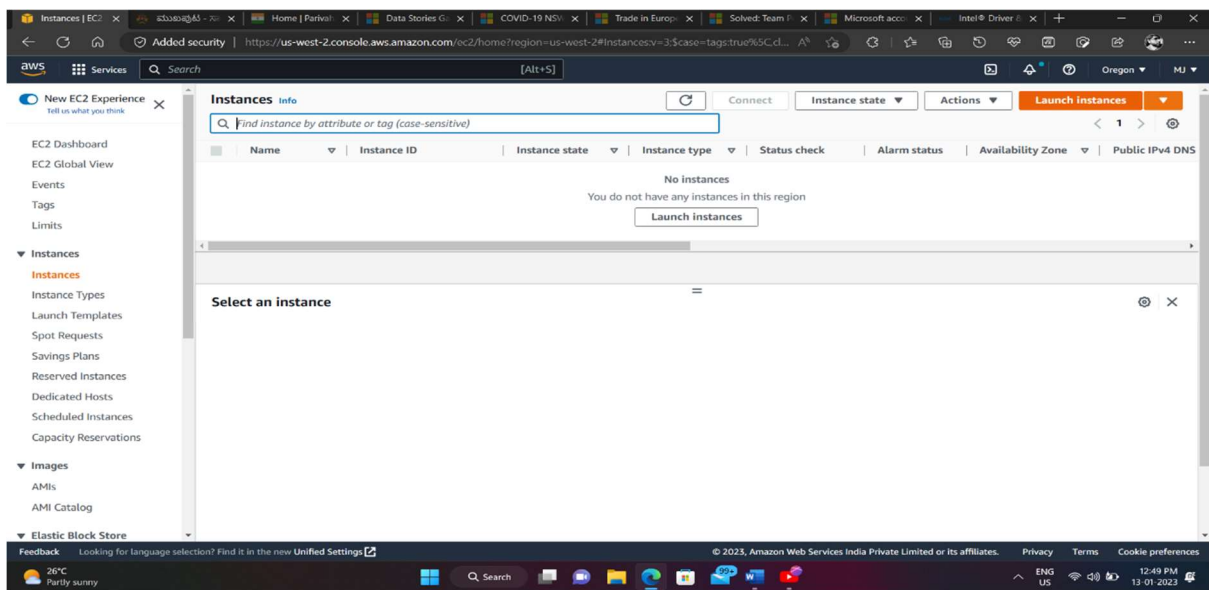

- Launch 2 EC2 Linux server instances in different Availability Zones of same region.
- Under 'Elastic Block Store', go to volumes and create a volume by selecting 1 of the AZ used to create the EC2 instance.
- Select the new volume created, go to 'Actions' and select 'Attach Volume'. (Volume and Instance must always be in the same AZ for them to attach/connect)
- After attaching the volume, we need to connect to the instance and mount the volume to the instance.
- Now for attaching the same volume for instance created in the different AZ we need to take the backup/Snapshot of the volume and 'Create volume from Snapshot'.
- Inside the settings of 'Create volume from Snapshot' we should select the different AZ that we used to create a 2nd EC2 instance for it to attach.
- After the volume is created from the snapshot follow the same procedure to attach and mount this volume to the instance.

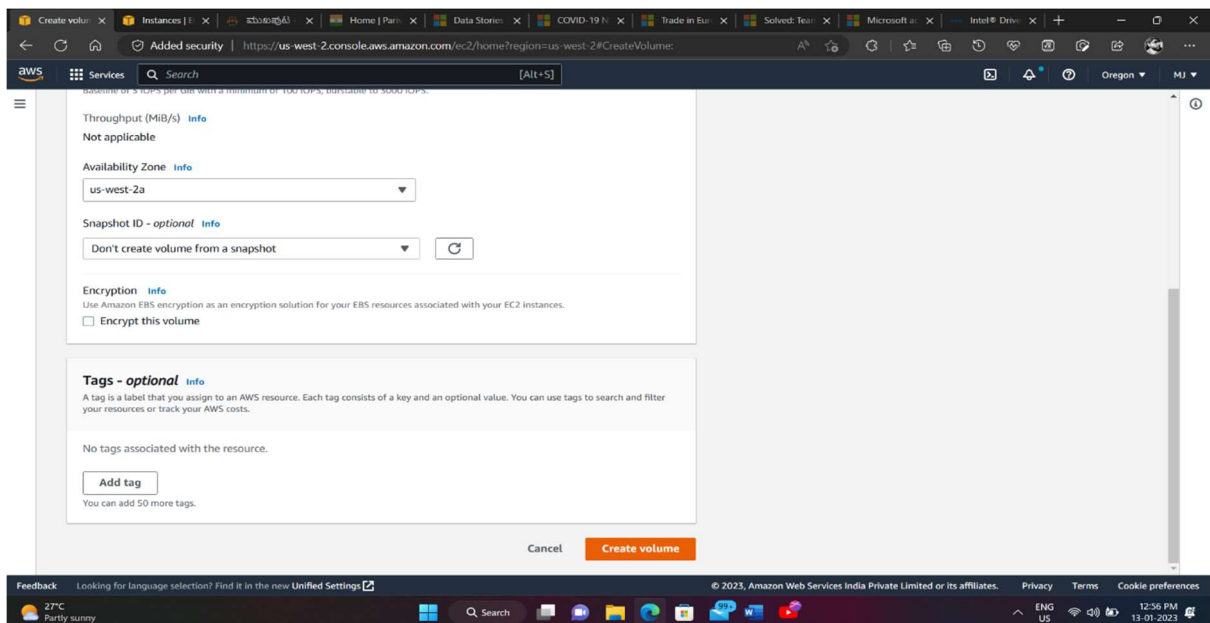

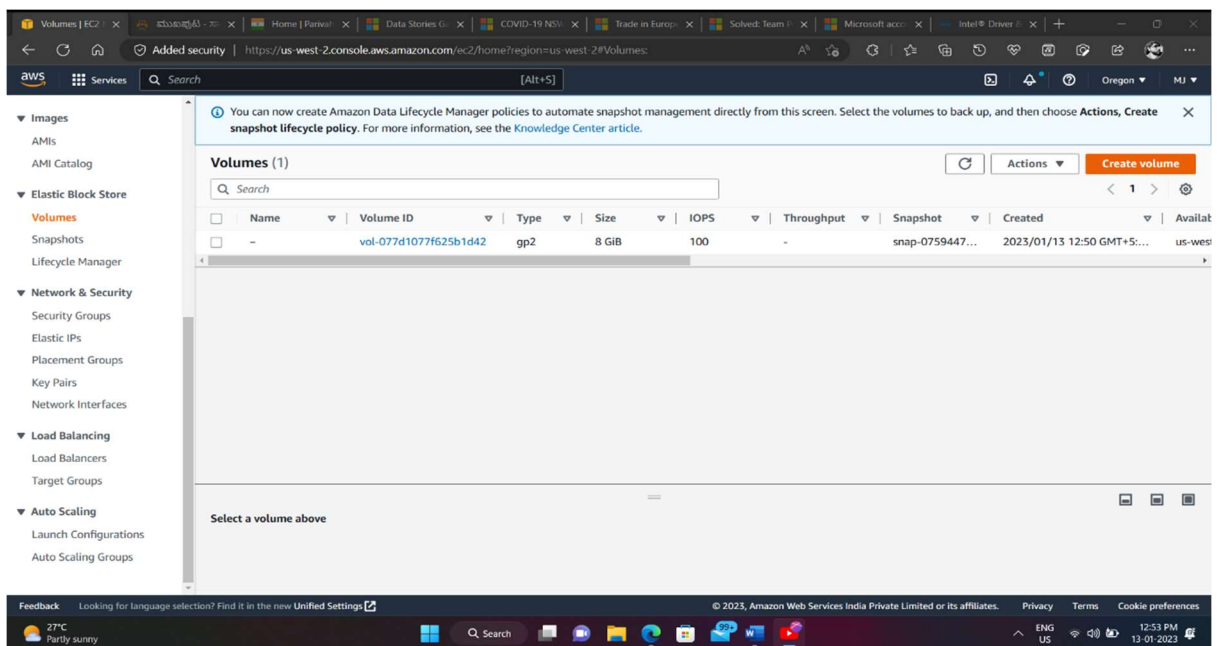

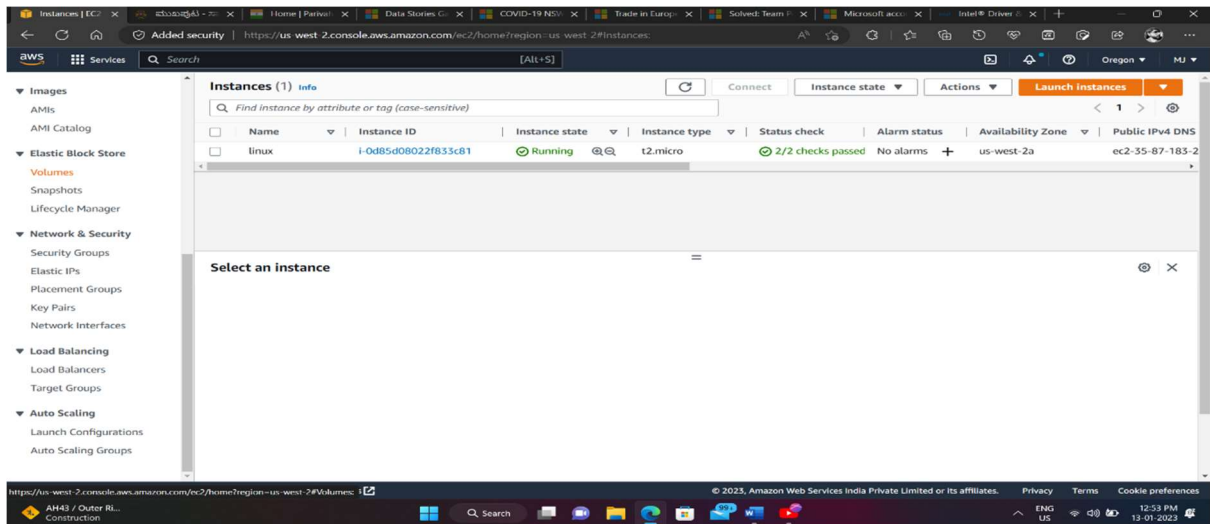

Linux Commands to mount and unmount the volume:

- `lsblk` #### list the available disks using the following command.
- `file -s /dev/xvdf` #### Check if the volume has any data using the following command.
- `mkfs -t ext4 /dev/xvdf` #### Format the volume to the ext4 filesystem using the following command.

- `mkdir /newvolume ###` Create a directory of your choice to mount our new ext4 volume.
- `mount /dev/xvdf /newvolume/ ###` Mount the volume to “newvolume” directory using the following command.
- `cd /newvolume & df -h ###` cd into newvolume directory and check the disk space to validate the volume mount.
- `umount /dev/xvdf ###` To unmount the volume.

Snapshots of the Assignment:

Successfully created volume vol-075f545f69c18b92b.

You can now create Amazon Data Lifecycle Manager policies to automate snapshot management directly from this screen. Select the volumes to back up, and then choose **Actions, Create snapshot lifecycle policy**. For more information, see the [Knowledge Center article](#).

Details Status checks Monitoring Tags

- Modify volume
- Create snapshot
- Create snapshot lifecycle policy
- Delete volume
- Attach volume
- Detach volume
- Force detach volume
- Manage auto-enabled I/O
- Manage tags

Attach a volume to an instance to use it as you would a regular physical hard disk drive.

Basic details

Volume ID: **vol-075f545f69c18b92b**

Availability Zone: **us-west-2a**

Instance: **i-0d85d0802f833c81**

Device name: **/dev/sdf**

Recommended device names for Linux: **/dev/sda1** for root volume, **/dev/sdf[1-p]** for data volumes.

Newer Linux kernels may rename your devices to **/dev/xvdf** through **/dev/xvdp** internally, even when the device name entered here (and shown in the details) is **/dev/sdf** through **/dev/sdp**.

Cancel Attach volume

Successfully attached volume vol-075f545f69c18b92b to instance i-0d85d08022f833c81.

You can now create Amazon Data Lifecycle Manager policies to automate snapshot management directly from this screen. Select the volumes to back up, and then choose **Actions, Create snapshot lifecycle policy**. For more information, see the [Knowledge Center article](#).

Windows taskbar and browser tabs are visible at the top. The browser address bar shows the AWS Management Console URL: `https://us-west-2.console.aws.amazon.com/ec2/home?region=us-west-2#Volumes:`.

The AWS console page is titled "Volumes (1/2)". A notification banner at the top states: "You can now create Amazon Data Lifecycle Manager policies to automate snapshot management directly from this screen. Select the volumes to back up, and then choose **Actions**, **Create snapshot lifecycle policy**. For more information, see the [Knowledge Center article](#)."

The left sidebar shows the navigation menu with categories: EC2 Dashboard, EC2 Global View, Events, Tags, Limits, Instances, Images, and Elastic Block Store.

The main content area displays a table of Volumes:

	Name	Volume ID	Type	Size	IOPS	Throughput	Availability Zone	Availability
<input type="checkbox"/>	linux	vol-077d1077f625b1d42	gp2	8 GiB	100	-	us-west-2a	Available
<input checked="" type="checkbox"/>	Attachment	vol-075f545f69c18b92b	gp2	10 GiB	100	-	us-west-2a	Available

An "Actions" dropdown menu is open for the selected volume, showing options: Modify volume, Create snapshot, Create snapshot lifecycle policy, Delete volume, Attach volume, Detach volume, Force detach volume, Manage auto-enabled I/O, and Manage tags. The "Create snapshot" option is highlighted.

Below the table, the details for the selected volume are shown:

Volume ID: vol-075f545f69c18b92b (Attachment)
